MAITREY BHARAMBE

Aspiring Data Analyst | Data Analytics & AI Engineering
+91 99673 36454 | maitrey.bharambe24@gmail.com | Mumbai, India

SUMMARY

Aspiring Data Analyst with hands-on experience turning raw market and sensor data into actionable insight through SQL/Python-based ETL pipelines, exploratory data analysis, statistical analysis, and interactive dashboards. Comfortable across the full analytics lifecycle — data collection, cleaning, modeling, evaluation, and visualization — with additional exposure to RAG and applied machine learning.

SKILLS

Languages: Python, SQL, Java, JavaScript
Data Analytics: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Visualization, Matplotlib
Data Engineering: ETL Pipelines, Web Scraping (BeautifulSoup, Selenium), PostgreSQL, MongoDB, ChromaDB, AWS S3, Docker
Machine Learning & AI: Scikit-learn, TensorFlow/Keras, Retrieval-Augmented Generation (RAG), Embeddings, LangChain/LangGraph
Tools: Streamlit, REST APIs, React.js/Node.js, Git, GitHub

EXPERIENCE

AI Intern — Tata Power *Jun 2026 – Jul 2026*

- Built ETL pipelines to ingest and process DAM, RTM, temperature, and historical market datasets for electricity market intelligence.
- Engineered a Retrieval-Augmented Generation chatbot with hybrid semantic search (ChromaDB + Sentence Transformers) to surface data-driven market insights.
- Optimized data chunking, caching, and retrieval pipelines, improving system performance and response accuracy.
- Built an interactive Streamlit application to visualize and analyze market data for end users.

Software Development Engineer Intern — Fundora *Jan 2026 – Apr 2026*

- Design and develop backend services and clean APIs used to process and serve data across the platform.
- Implement CI/CD pipelines and containerize applications with Docker to ensure consistent, reliable deployments.

Technical General Manager — Computer Society of India (CSI), VIT *Jul 2026 – Present*

- Lead technical projects and coding competitions; mentor junior members on backend development and version control best practices.

Open Source Contributor — GirlScript Summer of Code *Jul 2025 – Sep 2025*

- Contributed production-ready code to open-source repositories using Git-based workflows and structured issue tracking; resolved bugs and participated in code reviews with project mentors.

PROJECTS

TCS Agentic Hackathon — Runner-up —

- Built a student-message phishing detector combining a Random Forest classifier with a RAG model to analyze flagged messages and generate recommended actions.
- Designed the pipeline to score incoming messages for phishing risk, retrieve relevant context via RAG, and surface an explainable, actionable recommendation for moderators.
- Placed Runner-up among competing teams for the solution's accuracy, explainability, and practical deployability.

Tomato Leaf Disease Prediction — Ensemble Deep Learning —

- Built an automated plant disease classification pipeline (EfficientNetB0 + ResNet50) on the Kaggle Tomato Leaf Disease Dataset, reporting accuracy, precision, recall, and F1-score.
- Applied image preprocessing, augmentation, and transfer learning; combined outputs from multiple CNN models via ensemble prediction, achieving higher classification performance than any individual model.
- Integrated LIME (Local Interpretable Model-Agnostic Explanations) to visually highlight disease-affected regions, improving model interpretability.

AI Codebase Explainer — CodexAI —

- Built a system that analyzes entire code repositories and answers natural-language questions about the codebase using Retrieval-Augmented Generation with embeddings and vector search.
- Integrated MongoDB Vector Search for efficient high-dimensional storage/querying, and designed the pipeline to surface architectural insights such as component explanations and code flow.

F1-QL Racing Agent — Reinforcement Learning —

- Built a Q-learning racing simulation with custom reward functions for track adherence, speed control, and lap efficiency; ran a workshop on the results.

EDUCATION

Bachelor of Technology in Computer Engineering *2024 – 2028*
Vidyalankar Institute of Technology, Mumbai | CGPA: 9.33

Higher Secondary Education (12th)
Seth Hirachand Mutha College, Mumbai | Percentage: 77.33%
